

Supporting Software Evolution Analysis with Historical Dependencies and Defect Information

Marco D'Ambros and Michele Lanza
REVEAL, Faculty of Informatics
University of Lugano
Switzerland

Detecting problematic areas in an evolving software system to prioritize the reengineering effort

Problem

Software Evolution concerns several releases of a software

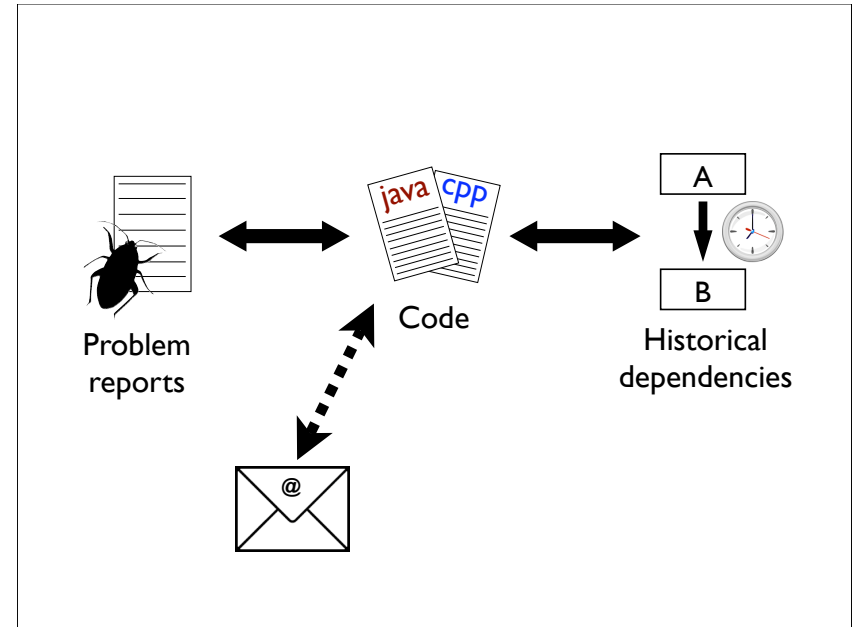

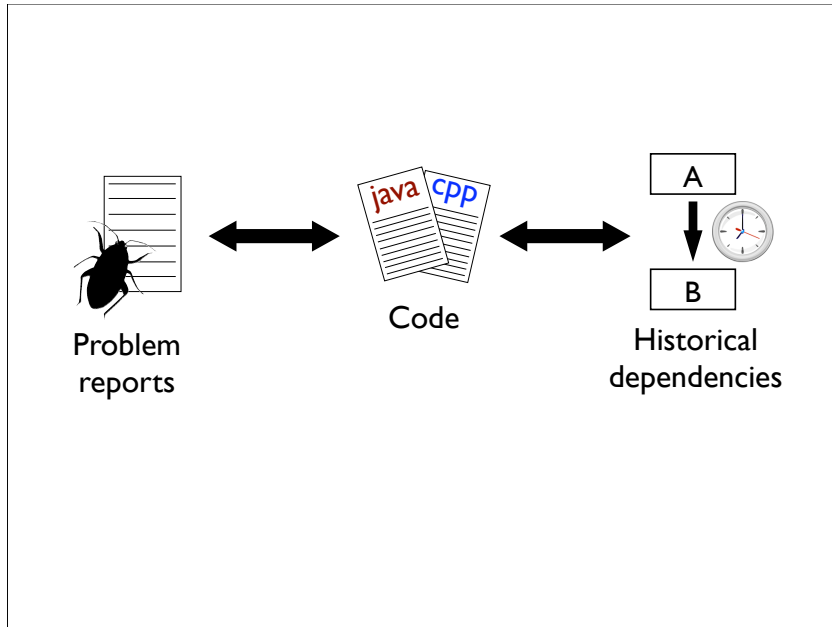

Software Evolution concerns **a process**

Software Evolution concerns **a process**

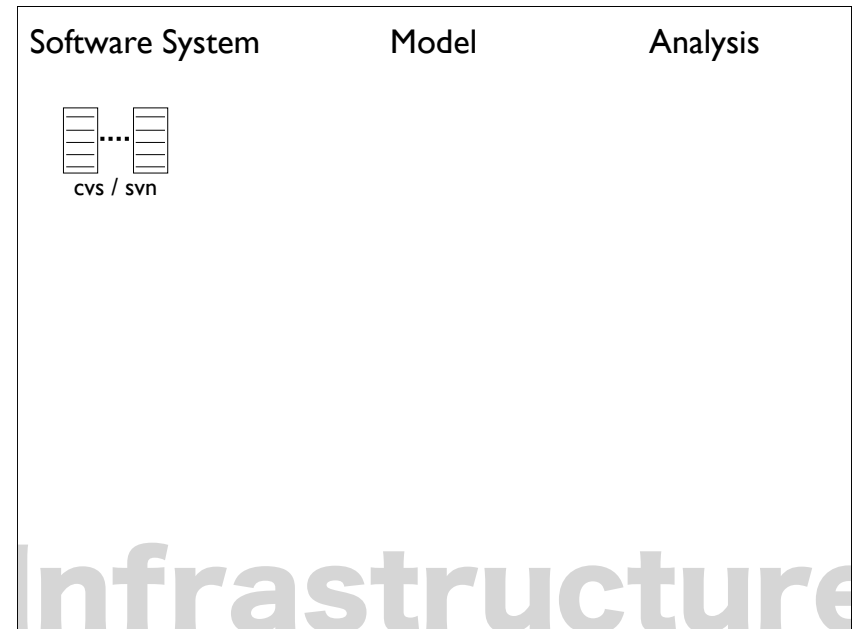

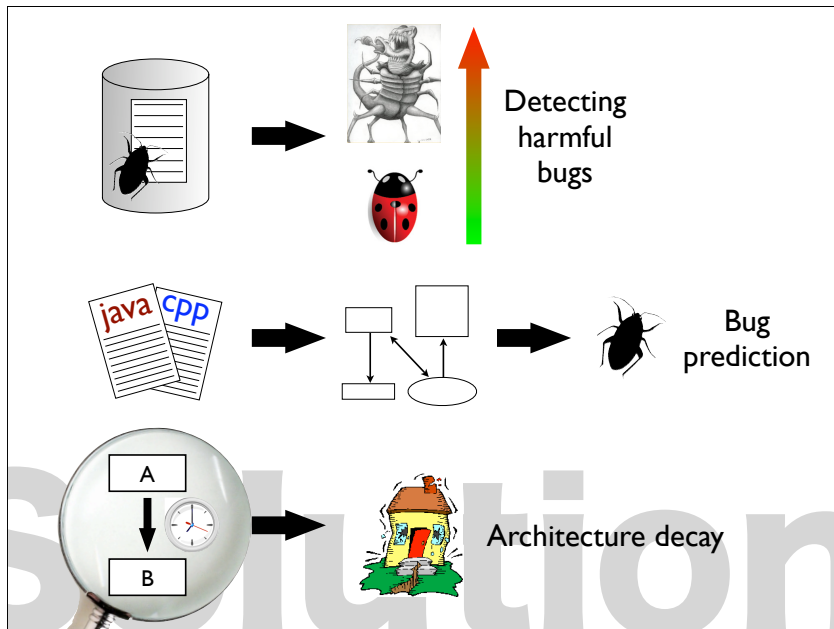

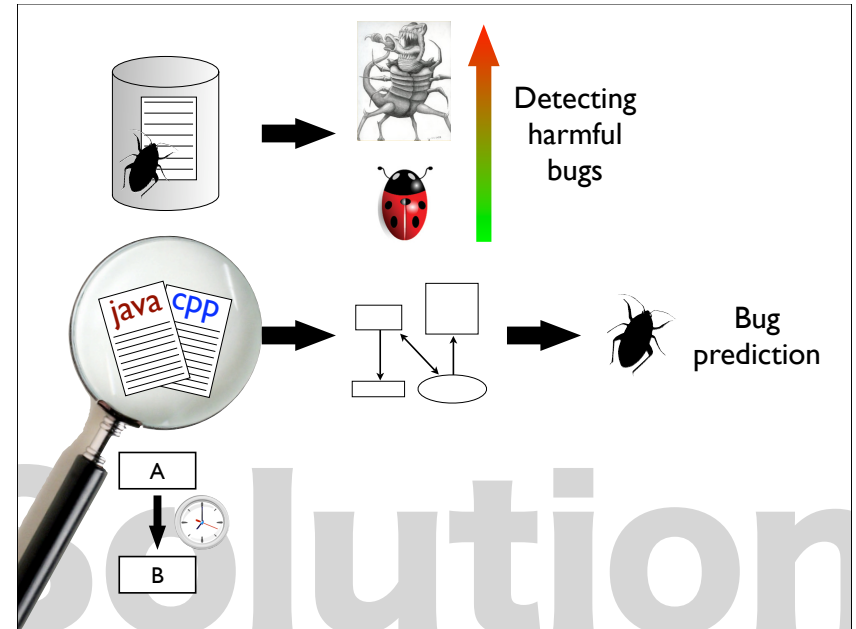

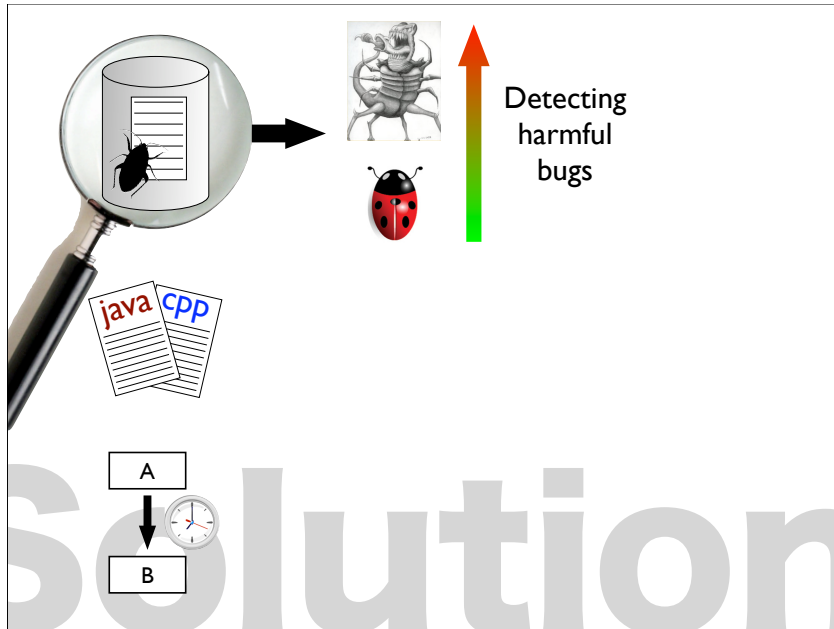

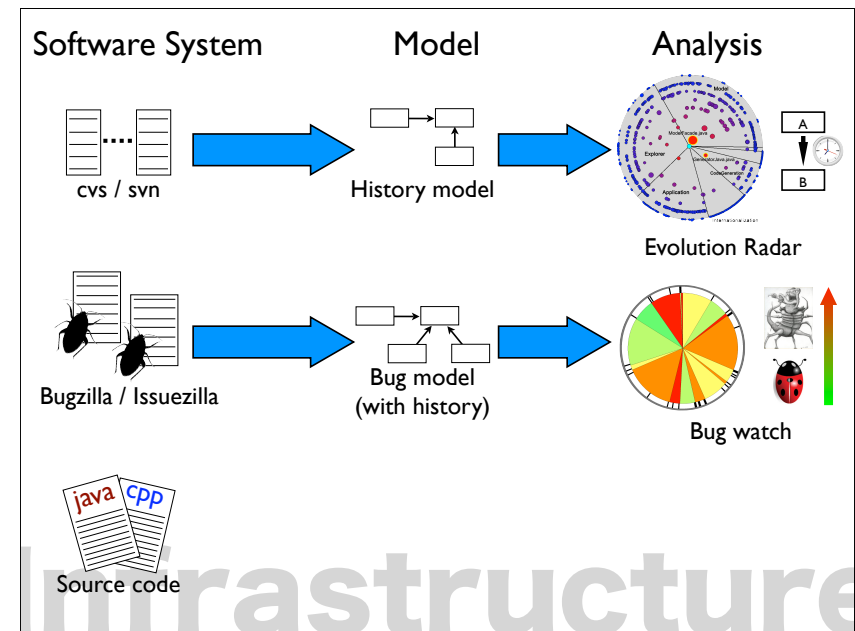

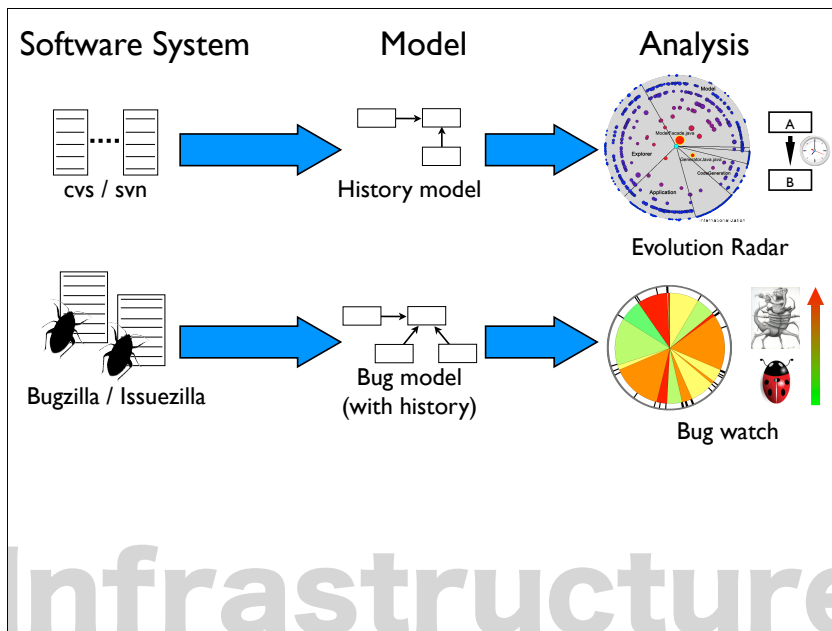

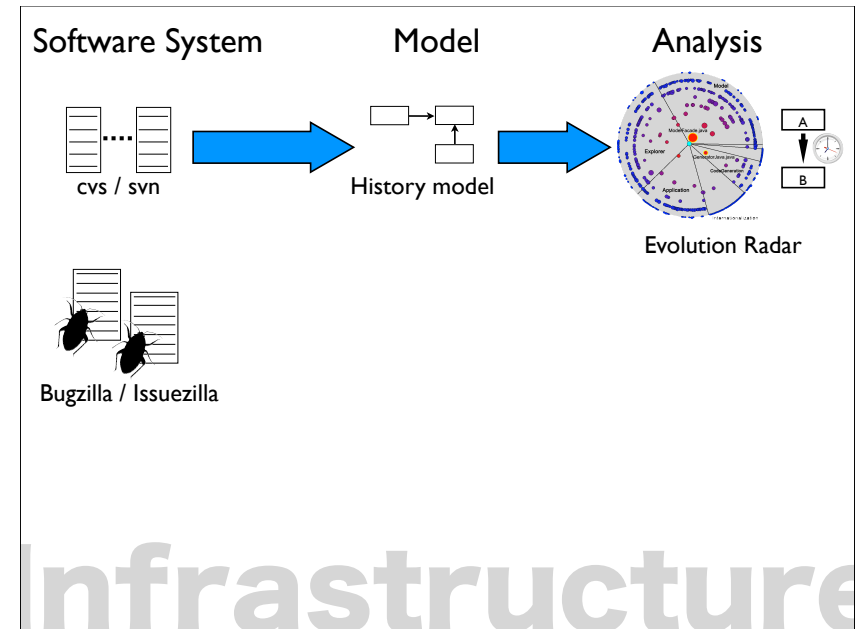

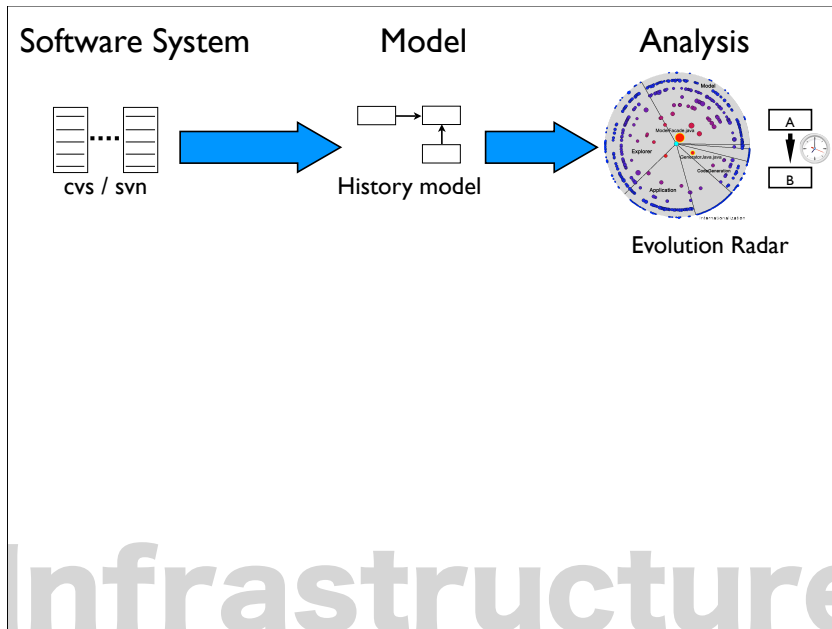

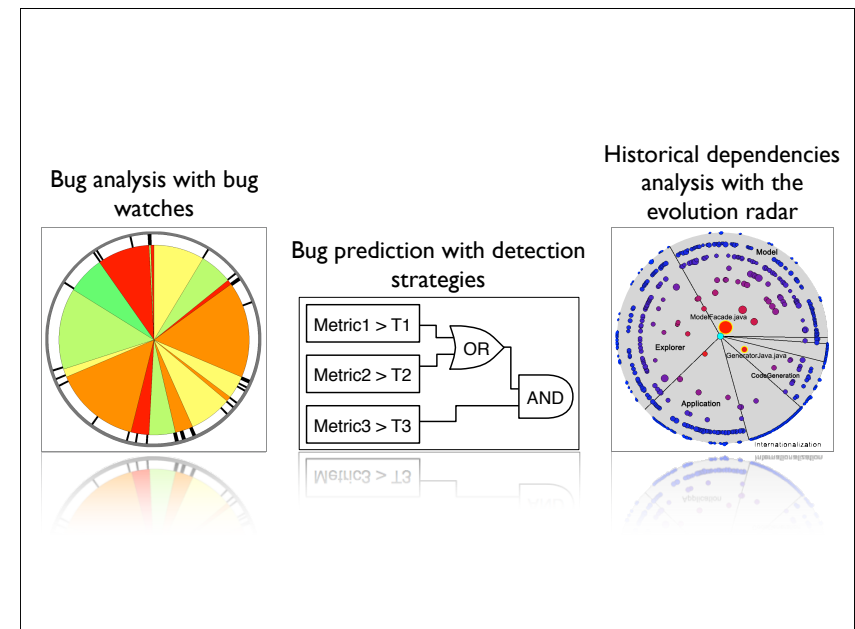

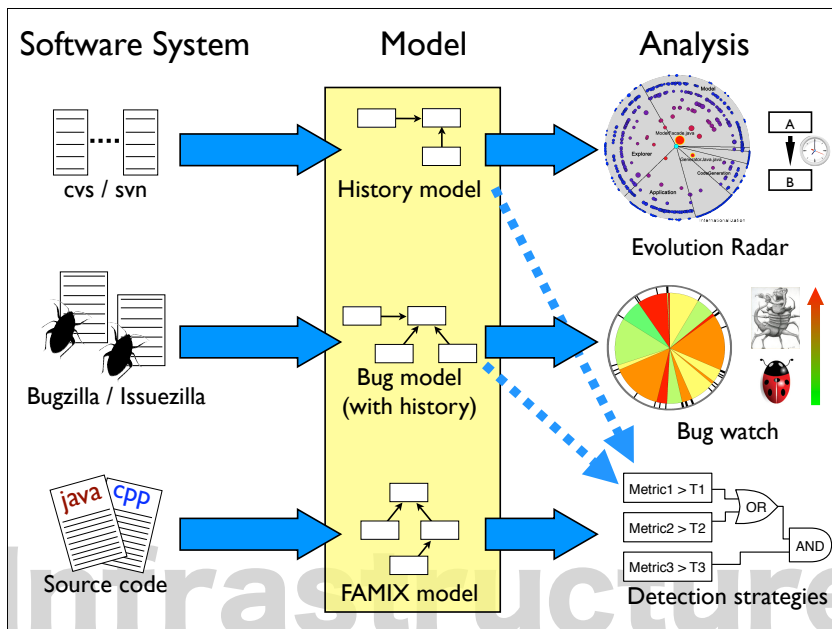

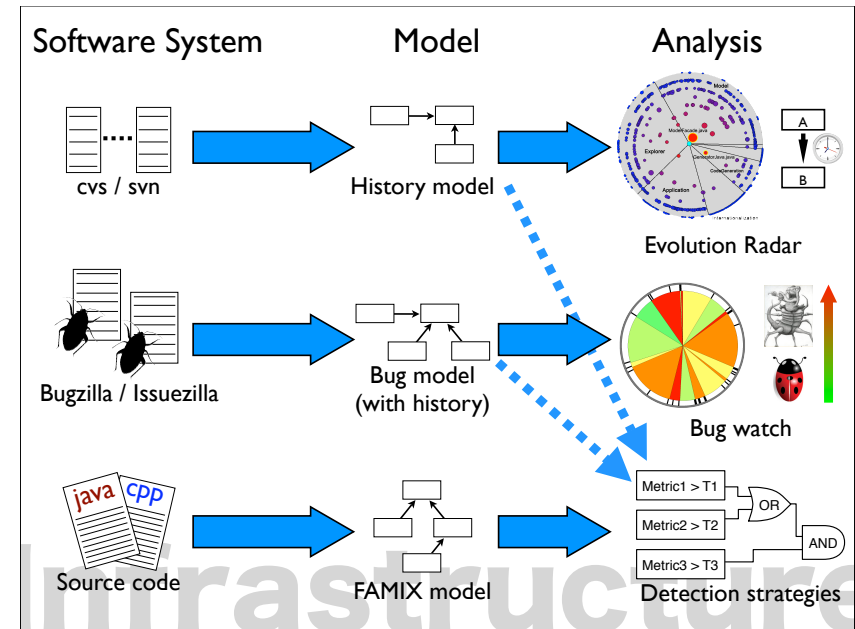

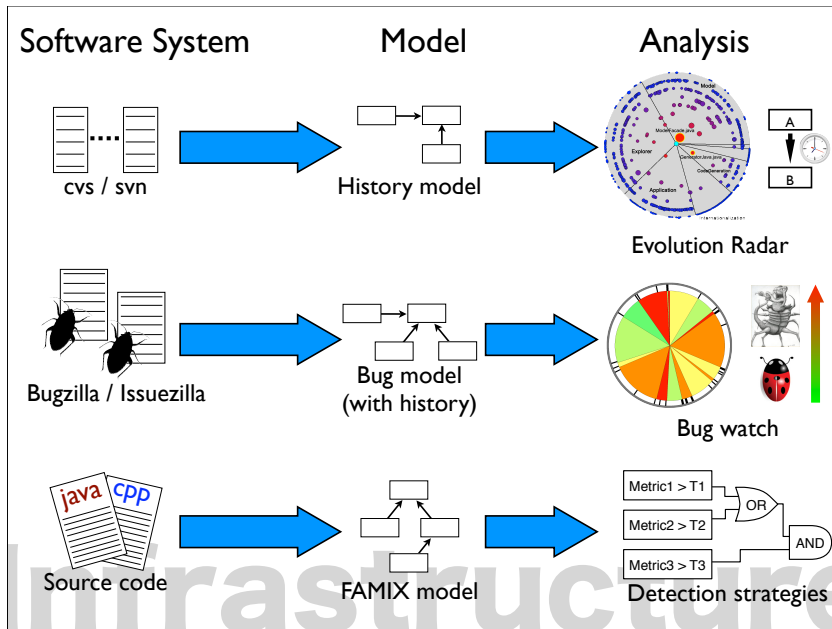

Combining source code, bug reports, and change coupling analyses reveals problematic areas in evolving software systems

Thesis

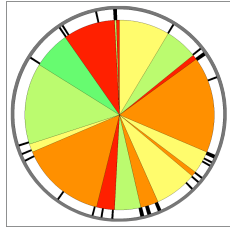

Bug analysis with bug watches

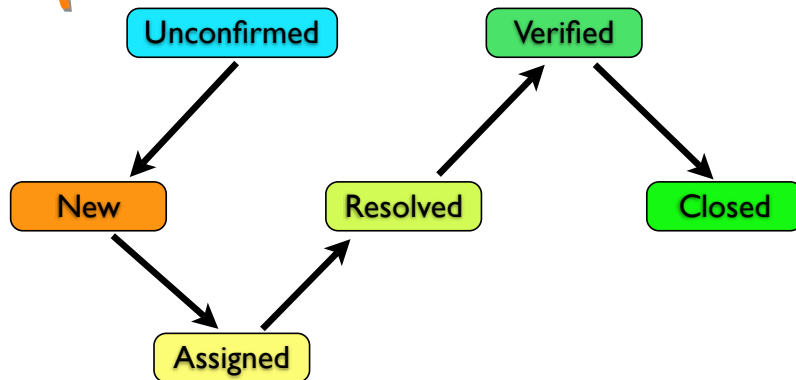

Bugs are complex entities which evolve

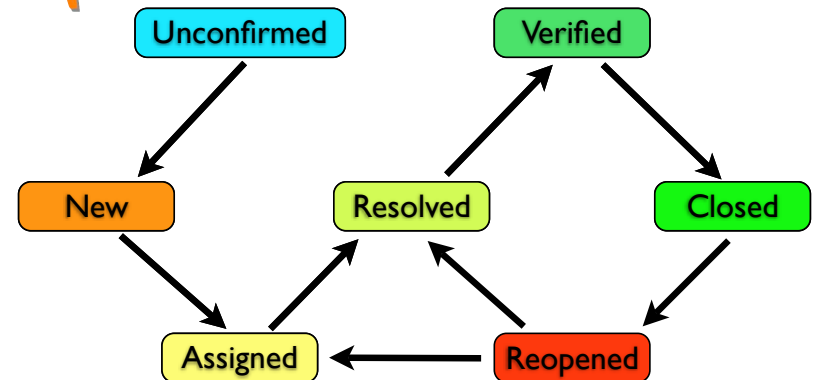

Unconfirmed

Bugs are complex entities which evolve

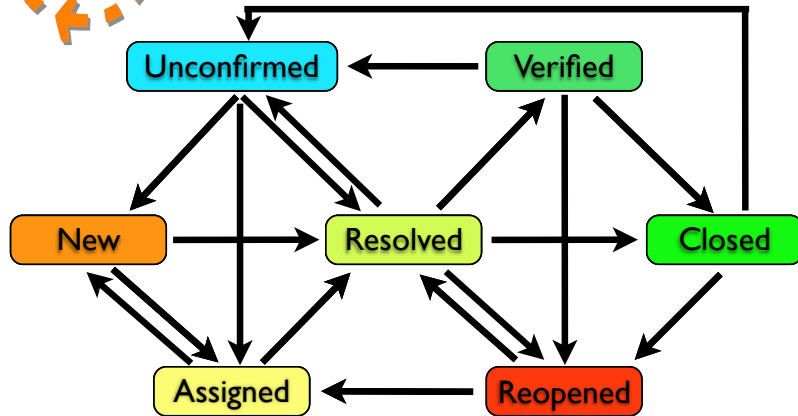

Bugs are complex entities which evolve

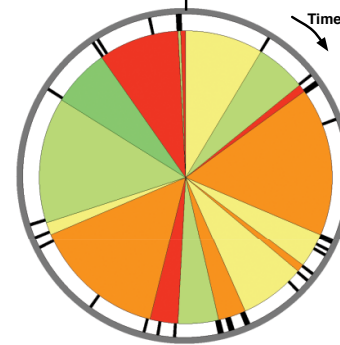

Bugs are complex entities which evolve

Bug prediction with detection strategies

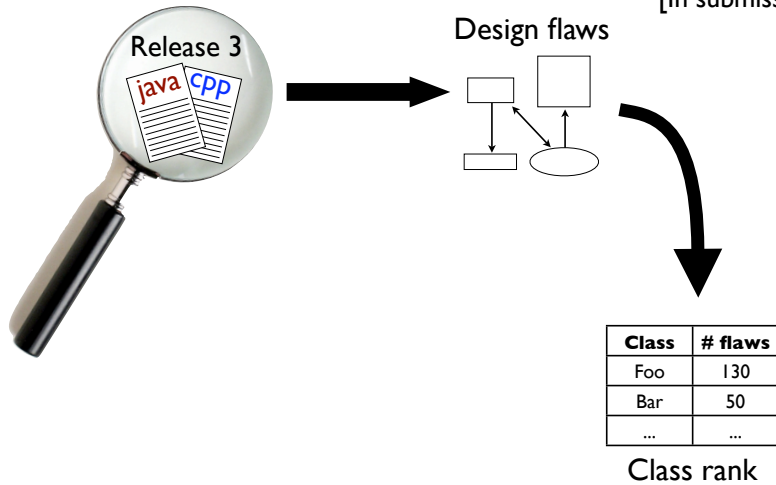

[In submission]

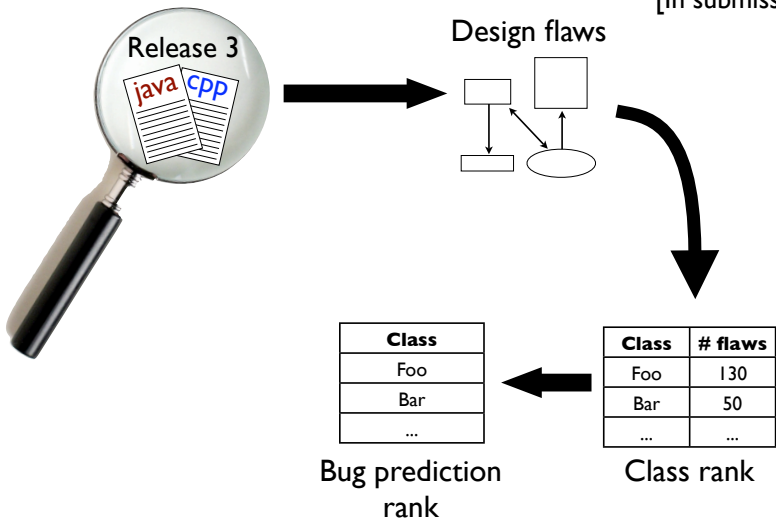

[In submission]

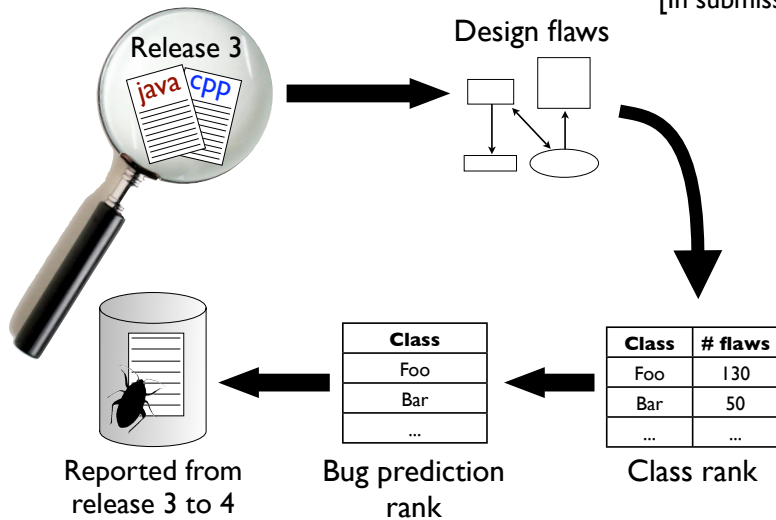

[In submission]

[In submission]

[In submission]

Detection strategies [Lanza, Marinescu '06] are:

- formalized design flaws

Detection strategies [Lanza, Marinescu '06] are:

- formalized design flaws
- metrics-based

Lines of code

McCabe's cyclomatic complexity

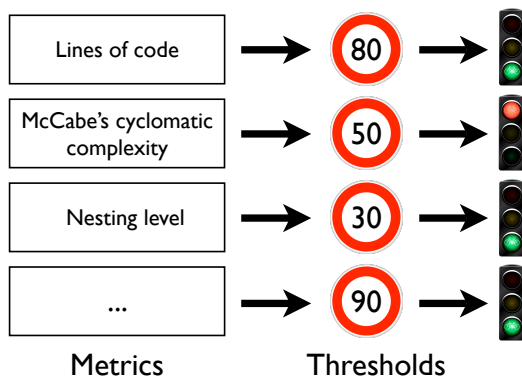

Nesting level

...

Metrics

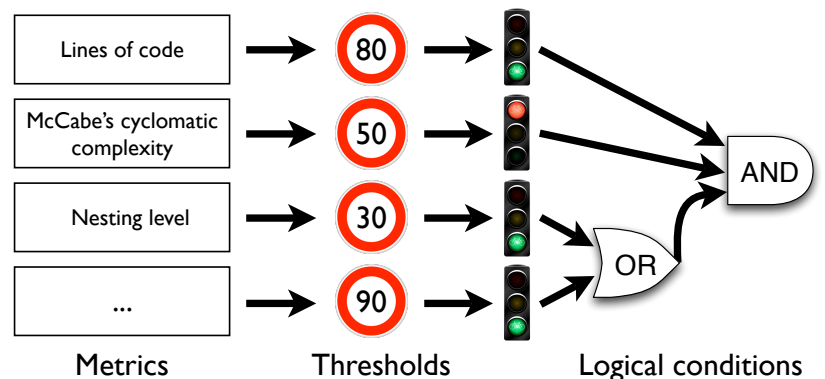

Detection strategies [Lanza, Marinescu '06] are:

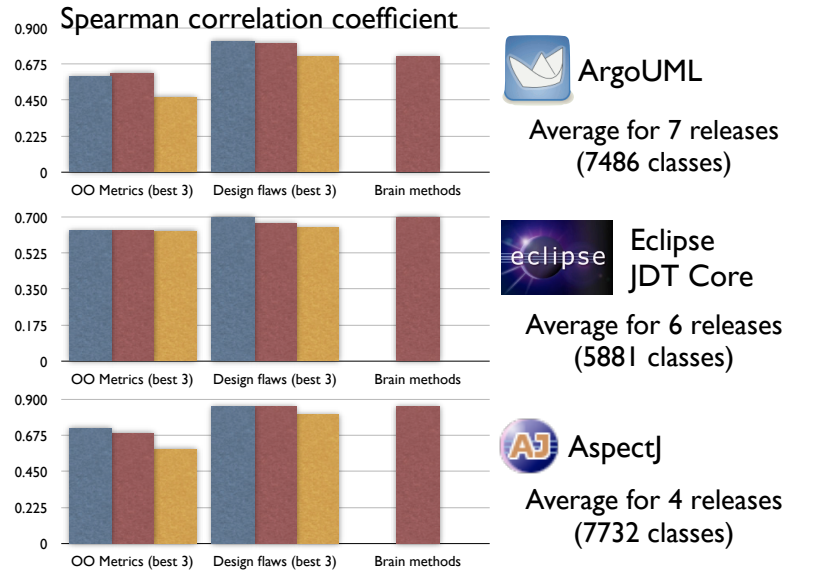

- formalized design flaws
- metrics-based

Detection strategies [Lanza, Marinescu '06] are:

- formalized design flaws
- metrics-based composed logical conditions

Historical dependencies analysis with the evolution radar

Change coupling* is ...

* [Ball et al. '97]
[Gall et al. '98]

Change coupling* is ...

... an **implicit dependency** between artifacts
observed to change together

* [Ball et al. '97]
[Gall et al. '98]

Visualizing **integrated** change coupling information

Azureus
